How to make your very own homemade, eco-friendly, sustainable Mask?

Grab a piece of fabric and fold it in half then place the pattern of top and pin it in place. Cut it out and repeat so that you have 4 pieces of fabric keep the 2 sides together

Then sew along the curved edge of the piece of fabric on both pairs of fabric

Then fold out both pieces of fabric and place them so that the nice sides are facing each other and sew along the line seen here

When done push it so that the right sides are facing out and the seams are facing in.

After that you need to add the elastic
For side 2 you can easily attach it to the end corners but for side 1 you need to sew up the edge (by folding it in) and elastics at once
